

Tank Storage Solutions

PRODUCT SHEET: LINER WATERPROOFING

APRO Industrie proposes 2 sealing systems (liner or mastic). Each system is adapted to different storage applications, thus providing an appropriate response to each problem encountered (industry, communities, etc.)

PROCESS

In the case of a liner seal, the metal tank is lined internally with a membrane ensuring a complete seal. Since the metal shell is not in contact with the stored liquid, it only serves a structural role.

The materials of our membranes are chosen according to the storage requirements encountered. In all cases, a compatibility analysis is carried out by APRO Industrie to guarantee the perfect adequacy of the chosen materials to the storage conditions. Furthermore, Apro guarantees the respect of any standards required for certain applications such as in the food industry or the storage of drinking water.

Our membranes are one-piece and are prefabricated in factory to the dimensions of the tank.

Membrane waterproofing is suitable for new projects, but it can also be used to cover existing tanks (welded steel, concrete, etc.), to give them a second life or simply to extend their operation by a few years while saving the cost of a complete reconstruction (renovation).
